

Lead Mechanical Engineer

Contact Energy www.contactenergy.co.nz
Wairakei, Taupo, New Zealand

- NZ's largest geothermal power station project.
- Design review and construction assurance focus.
- World class geothermal business.

Contact has a world class geothermal energy business and right now it's full steam ahead. This is your opportunity to join the project team developing NZ's largest geothermal power station – Te Mihi, Taupo. As the Lead Mechanical Engineer for this project you will support the Engineering Manager in Contact's team to carry out and support the mechanical and process engineering design review and construction quality assurance with an emphasis on health and safety, quality, cost, schedule and compliance with contract specifications.

Essential to securing this role will be your excellent communication skills, your high integrity and your ability to build and maintain effective working relationship with a wide variety of stakeholders and the Contact team. You will have extensive (15 plus years) of experience in the management of mechanical and process engineering design work, including pipeline and rotating equipment design, power station and/or large process plant construction and commissioning. You will have been involved in large process plant and/or power station construction and specific geothermal experience would be advantageous.

At Contact we are committed to being **first** when it matters. To do this we need your **fresh** ideas and **open** approach. **Unite** with Contact to explore, uncover and discover your future.

Please apply online or call Natalie on +64 4 462 1259 or email resourcing.team@contactenergy.co.nz for more info.
