

- We have a Project Agreement:
 - We wish to cooperate to develop a clean energy park on the Land that utilises geothermal energy and electricity for the purpose of accommodating geothermal energy users, users of alternative clean energy sources, or geothermal/renewable energy industry related businesses.

• It is the Parties' intention to develop the Clean Energy Park as a low carbon and sustainable project and the Parties may actively promote that fact when the Clean Energy Park is operational.

- The term of this agreement will be 20 years from the Commencement Date.
- We will consult and actively work with Contact as and when reasonably required in relation to the development of the Clean Energy Park.

- TPoW acknowledges that the Land is located overlying a geothermal field and as such the area may be subject to land deformation from time to time.
- Contact will provide all available information it holds with regards to subsidence and/or land deformation affecting the Land.
